• <i>Protection of hands:</i> Due to missing tests no recommendation to the glove material can be given for the chemical mixture.	
Selection of the glove material on consideration of the penetration times, rates of dig	fusion and the degradation
Protective gloves	
The glove material has to be impermeable and resistant to the product/ the substanc	e/ the preparation.

· Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
